Ohio Family to Family

Support, Training and Resources

About Ohio Family to Family

The Ohio Family to Family (Ohio F2F) Information Center helps families of children with disabilities and special health care needs navigate the health care system and find answers to their questions.

The center is staffed by family members experienced at accessing care for their own children with special health care needs. The Ohio F2F team provides families and the professionals who serve them with support, training, information and resources.

Ohio F2F's aim is to help families become informed advocates for their children. Services are free to all Ohio residents.

A grant from the Maternal Child Health Bureau (MCBH) and the Health Resource Service Administration (HRSA) makes Ohio F2F possible.

What We Do

Ohio Family to Family provides:

Support

The family members who staff Ohio F2F are experienced at navigating Ohio's healthcare systems and they can help guide your family too. Ohio F2F works to support effective partnerships between parents and health care professionals.

Training and Information

Ohio F2F provides training to families on advocacy, medical home, family-centered care, and other important information. They provide training to professionals on concepts related to care coordination, and the Medical Home Model—a philosophy of primary care promoting healthcare that's coordinated, accessible, and focused on quality and safety.

Resources

Ohio F2F can connect you to local and statewide resources for families of children and youth who have disabilities and special healthcare needs.

Ohio Family to Family's aim is to help families become informed advocates for their children. Services are free to all Ohio residents.

Our Vision

Our vision is for all families of children with special health care needs to receive best practice quality health care and community services.

We also envision that all health care professionals providing care to these families use the Medical Home Model—which is family-centered and accommodates families' needs.

Our Mission

Our mission is to educate all families to access quality health care for their children with disabilities and special healthcare needs. We provide training, information, and education to families navigating healthcare systems. We also work on improving partnerships with professionals.
